Preface

In 1966, the American Association of Petroleum Geologists (AAPG) expanded its statistical program to include development drilling as well as exploratory drilling. Drilling data collected by the AAPG for wells drilled in 1966 were published monthly by *The Oil and Gas Journal,* and annual summaries were published by the AAPG.

During the years 1967–1969 the AAPG continued to compile the drilling statistics, which were published by the API in the *Quarterly Review of Drilling Statistics* (QRD) and annually in the AAPG *Bulletin.* In January 1970 the API assumed the responsibility for the collection and the publication of drilling statistics for the United States.

The data collection procedures used by the API are essentially the same as those originally developed by the AAPG. The United States is divided into 30 districts. For each district there is an API respondent responsible for reporting the initial well information to the API, either on an API well ticket or in a machine-readable format for direct computer entry. This information is edited for accuracy and completeness and entered into the API database for subsequent monthly and quarterly retrievals.

Each of the 30 districts also has a district Chairman of the AAPG's Committee on Statistics of Drilling (CSD) who is responsible for reviewing all well classifications reported to the API. He also classifies all exploratory wells according to the Lahee guidelines and provides additional geological information for exploratory wells.

During the years 1967 through 1984, the statistics presented in the QRD were for completed wells *reported* to the API during each quarter. They did not reflect the total number of wells actually completed during the quarter.

As drilling activity began to increase in the late 1970s and early 1980s, the time lapse between the quarter in which the wells were completed and the quarter in which the wells were included in the published data began to widen for reasons that were beyond the control of the API. In order to provide more useful information to the data-user community the manner of presenting the data was changed in 1985.

Beginning with the First Quarter 1985, the API *Quarterly Completion Report* (QCR) replaces the QRD. The data presented in this, and future, quarterly reports will classify wells according to the month they were completed as opposed to the month they were reported, as was done previously. (Additional information on the contents of the QCR are included in the text.)

Since the well and footage data are often reported with a significant time lag, the data for a given period will be subject to further change for some period in the future. Thus, to provide the data user with some measure of current activity, the QCR also will include quarterly estimates of total well completions and footage drilled. These estimates will be for the current quarter and eight prior quarters and represent API's best estimate of the total number and footage of wells actually completed in a given quarter.

The API also has prepared an historical compendium, *Well Completions and Footage Drilled in the United States, 1970–1982,* which provides information on the revised basis for the years prior to those included in the QCR.

Washington, D.C.
November, 1985

The API Quarterly Completion Report

Introduction. As noted in the Preface, the API has revised its statistical reporting procedures for the quarterly drilling reports, effective with the First Quarter, 1985. Thus, the well and footage information included in the *Quarterly Completion Report* (QCR) are not comparable with the statistics published in the *Quarterly Review of Drilling Statistics* for the years 1967 through 1984. This series was discontinued with the Fourth Quarter 1984 issue.

The discontinued series presented the well and footage data on the basis of the quarter in which they were received by the API. Because of reporting delays, these data did not necessarily reflect the total number of wells actually completed during the period in which they were reported.

The new series of quarterly reports categorize all wells in the quarter in which they were completed, regardless of when they were reported to API. As additional wells for a quarter are received, they will be added to the API database and published in subsequent reports.

Acknowledging the fact that the reporting time-lag will continue to affect the well data, regardless of the manner of presentation, the API also includes estimates of total well completions.

Further information on the time lag affecting the well data; the revised tabular presentations; and the drilling estimates are contained in the sections which follow.

The Time Lag. The time lag, referred to here, is the number of months between when a well is completed and when it is reported to the API. The time lag is not uniform throughout all reporting districts and tends to vary as the level of drilling activity changes. However, on average, 63% of the wells are reported within three months of when they are completed and 90% are reported within 12 months of when they are completed.

The table, "Annual Number of Oil and Gas Wells and Dry Holes: Revised Series vs. Reported Series," compares the number of wells as reported in the discontinued series (on the basis of the year reported) with the actual number of well completions categorized by the time of completion.

The Reporting Format. The tables presented in the *Quarterly Completion Report* (QCR) show the number of well completions for the quarter, based on the latest data reported to API. For example, the January through March, 1985 table, previously published, showed the number of wells which had January through March completion dates, which the API had received during the first quarter of 1985.

Annual Number of Oil and Gas Wells and Dry Holes: Revised Series Vs. Reported Series

Year	*Number of Completions*	*Number of Wells Reported*
1970	28,173	28,120
1971	26,268	25,851
1972	27,934	27,291
1973	27,692	26,592
1974	33,037	31,698
1975	38,884	37,235
1976	40,940	39,765
1977	45,855	44,982
1978	50,061	47,057
1979	51,890	49,816
1980	69,713[a]	60,845
1981	89,816[a]	78,538
1982	82,262[a]	85,795

[a] Revised well and footage data, by well type, are shown on page 64.

As additional completions are received for each quarter they will be included in subsequent revised quarterly reports. Thus, the July through September 1985 QCR includes a revised First Quarter 1985 table which includes January through March completions received by the API during the first three quarters of 1985.

The QCR includes both quarterly and annual tables. The quarterly tables present statistics for total well completions only. Separate tables are now shown for exploratory and development well completions. Under the new reporting procedures, insufficient state and area information is available for exploratory drilling to provide any useful information. However, separate U.S. totals for exploratory and development well completions are shown at the bottom of each quarterly table.

Annual tables are included in the QCR for two prior years. Separate tables are shown for total wells, exploratory wells, development wells, and new-field wildcat wells. These tables also will be revised on a quarterly basis to show additional reporting.

Well completions by depth interval are provided on a quarterly and annual basis. The quarterly tables include total completions only. The annual tables give the completions by depth range for the total United States and for exploratory wells as well as for onshore and offshore completions separately.

Each quarterly and annual table provides information on the number of completions and footage drilled which were reported on these tables when they were first published. These data should give the data user guidance as to the time lag for each area as well as the extent of completeness of the more current data.

Estimated Drilling Activity. Information on well completions and footage drilled will be incomplete for the most recent quarters, due to the reporting lag. Therefore, to provide data users with a more useful measure of drilling activity, the QCR will publish estimated well and footage information for the current quarter and eight prior quarters.

Regression estimates will be made for well completions and footage drilled for total oil wells, gas wells, and dry holes, based on information currently included in the API database. The estimates will be further subdivided into five depth intervals. Separate estimates for exploratory and development drilling, for the total United States, also will be shown. The estimates will be revised each quarter, as more information is received, until it is determined that the maximum point of accuracy has been achieved.

However, caution should be exercised in using the estimates, particularly for the most current quarters. Although the estimating procedures demonstrate that these estimates achieve an acceptable level of accuracy, the degree of accuracy rises as more information for each quarter's activity becomes available.

The estimates are made by means of a series of multiple regression equations which utilize not only information on wells reported but on the changing lag structure as well. Changes in the reporting patterns are detected by the equation and estimates adjusted accordingly, based on the historical relationship between reporting patterns and well completions. As more data become available, the estimates are revised by means of additional regression equations that accommodate the new information.

The well and footage estimates are made independently on a disaggregated basis (that is, oil, gas, and dry wells and footage by depth category), then summed to produce estimated totals. These estimates of total activity have been found to attain the same level of accuracy as estimates made from the aggregated data directly.

Additional information on the estimating procedures may be obtained by writing to: Drilling Statistics, American Petroleum Institute, 1220 L Street N.W., Washington, D.C. 20005.

Offshore Statistics. In offshore areas, it is often considered to be economically desirable to plug discovery wells drilled from mobile units and subsequently, to drill development wells from a fixed platform. Under these circumstances, the actual discovery wells are counted as dry holes since the wells were plugged and abandoned.

Therefore, caution should be used in utilizing data on offshore exploratory wells to determine the number of newly discovered fields. The data referred to are included in the annual tables entitled "Total Exploratory Well Completions and Footage Drilled" and "New-Field Wildcat Well Completions and Footage Drilled."

Definitions. The definitions used for the compilation of drilling statistics may be found in API Technical Report No. 1, *Standard Definitions for Petroleum Statistics,* Third Edition, 1981. The publication is available from the Publications and Distribution Section, American Petroleum Institute, Washington, D.C.

Additional descriptive information as well as maps defining the various state and federal offshore areas of the United States also is available. The publication, API Bulletin D12A, *The API Well Number and Standard State and County Numeric Codes Including Offshore Waters,* reissued May 1982, may be ordered from the API Production Department, 211 North Ervay, Suite 1700, Dallas, Texas 75201.

APPENDIX A

QUARTERLY COMPLETION REPORT: FOOTNOTES

Footnotes

SECTION I:

Estimated Well Completions and Footage Drilled

1. Estimated well completions and footage drilled are based on well information received by the API through September 30, 1985.

   These estimates are preliminary and subject to further revision. Additional information regarding these estimates can be found on page 2.

2. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly and annual periods indicated on the table and include all wells received by the API through September 30, 1985.

SECTIONS II–V:

Well Completions, By States and By Areas

1. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly or annual period indicated on the table. The well information included in this quarterly report is based on data received by the API through September 30, 1985.

   These data are subject to further revision as information is received by the API.

2. Includes multiple completion wells which produce oil from at least one zone, but may produce gas from one or more zones.

3. Includes multiple completion wells which produce gas from all zones. Gas wells also include condensate wells.

4. May include discovery wells in offshore regions. Please see "Offshore Statistics," on page 2.

   Footnote (4) is not applicable to the development well table.

5. The total number of wells and footage which initially were reported to the API during the period shown. Quarterly totals will not add to annual totals since additional information for a quarter will be received in later quarters and will be included in the annual totals.

6. Each of the states which is subdivided into an "offshore" area includes wells which were completed in both state and federal waters adjacent to those states. Wells reported under the subdivision "Offshore Federal Waters" are not duplicative of wells reported in the "offshore" areas shown with the respective states.

   Additional descriptive information as well as maps outlining the various state and federal offshore areas is published in API Bulletin D12A. Additional information regarding this publication is given on page 2.

Well Completions, By Depth Interval

1. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly or annual period indicated on the table. The well information included in this quarterly report is based on data received by the API through September 30, 1985.

   These data are subject to further revision as information is received by the API.

2. Does not include stratigraphic and core tests and service wells.

3. Wells are classified by depth intervals on the basis of the deepest total depth reported for each well, regardless of the total amount of footage drilled. For the majority of wells reported, the deepest total depth and the total footage drilled are equal. However, for old wells drilled deeper and for new wells sidetracked out of an original hole to a new bottom-hole location, the total footage drilled will be less than the deepest total depth.

Preface

In 1966, the American Association of Petroleum Geologists (AAPG) expanded its statistical program to include development drilling as well as exploratory drilling. Drilling data collected by the AAPG for wells drilled in 1966 were published monthly by *The Oil and Gas Journal,* and annual summaries were published by the AAPG.

During the years 1967–1969 the AAPG continued to compile the drilling statistics, which were published by the API in the *Quarterly Review of Drilling Statistics* (QRD) and annually in the AAPG *Bulletin.* In January 1970 the API assumed the responsibility for the collection and the publication of drilling statistics for the United States.

The data collection procedures used by the API are essentially the same as those originally developed by the AAPG. The United States is divided into 30 districts. For each district there is an API respondent responsible for reporting the initial well information to the API, either on an API well ticket or in a machine-readable format for direct computer entry. This information is edited for accuracy and completeness and entered into the API database for subsequent monthly and quarterly retrievals.

Each of the 30 districts also has a district Chairman of the AAPG's Committee on Statistics of Drilling (CSD) who is responsible for reviewing all well classifications reported to the API. He also classifies all exploratory wells according to the Lahee guidelines and provides additional geological information for exploratory wells.

During the years 1967 through 1984, the statistics presented in the QRD were for completed wells *reported* to the API during each quarter. They did not reflect the total number of wells actually completed during the quarter.

As drilling activity began to increase in the late 1970s and early 1980s, the time lapse between the quarter in which the wells were completed and the quarter in which the wells were included in the published data began to widen for reasons that were beyond the control of the API. In order to provide more useful information to the data-user community the manner of presenting the data was changed in 1985.

Beginning with the First Quarter 1985, the API *Quarterly Completion Report* (QCR) replaced the QRD. The data presented in the quarterly reports will classify wells according to the month they were completed as opposed to the month they were reported, as was done previously. (Additional information on the contents of the QCR are included in the text.)

Since the well and footage data are often reported with a significant time lag, the data for a given period will be subject to further change for some time in the future. Thus, to provide the data user with some measure of current activity, the QCR also includes quarterly estimates of total well completions and footage drilled. These estimates are for the current quarter and eight prior quarters and represent API's best estimate of the total number and footage of wells actually completed in a given quarter.

The API also has prepared an historical compendium, *Well Completions and Footage Drilled in the United States, 1970–1982,* which provides information on the revised basis for the years prior to those included in the QCR.

Washington, D.C.
March, 1986

The API Quarterly Completion Report

Introduction. As noted in the Preface, the API has revised its statistical reporting procedures for the quarterly drilling reports, effective with the First Quarter, 1985. Thus, the well and footage information included in the *Quarterly Completion Report* (QCR) are not comparable with the statistics published in the *Quarterly Review of Drilling Statistics* for the years 1967 through 1984. This series was discontinued with the Fourth Quarter 1984 issue.

The discontinued series presented the well and footage data on the basis of the quarter in which they were received by the API. Because of reporting delays, these data did not necessarily reflect the total number of wells actually completed during the period in which they were reported.

The new series of quarterly reports categorize all wells in the quarter in which they were completed, regardless of when they were reported to API. As additional wells for a quarter are received, they will be added to the API database and published in subsequent reports.

Acknowledging the fact that the reporting time-lag will continue to affect the well data, regardless of the manner of presentation, the API also includes estimates of total well completions.

Further information on the time lag affecting the well data; the revised tabular presentations; and the drilling estimates are contained in the sections which follow.

The Time Lag. The time lag, referred to here, is the number of months between when a well is completed and when it is reported to the API. The time lag is not uniform throughout all reporting districts and tends to vary as the level of drilling activity changes. However, on average, 63% of the wells are reported within three months of when they are completed and 90% are reported within 12 months of when they are completed.

The table, "Annual Number of Oil and Gas Wells and Dry Holes: Revised Series vs. Reported Series," compares the number of wells as reported in the discontinued series (on the basis of the year reported) with the actual number of well completions categorized by the time of completion.

The Reporting Format. The tables presented in the *Quarterly Completion Report* (QCR) show the number of well completions for the quarter, based on the latest data reported to API. For example, the January through March, 1985 table, previously published, showed the number of wells which had January through March completion dates, which the API had received during the first quarter of 1985.

Annual Number of Oil and Gas Wells and Dry Holes: Revised Series Vs. Reported Series

Year	*Number of Completions*	*Number of Wells Reported*
1970	28,173	28,120
1971	26,268	25,851
1972	27,934	27,291
1973	27,692	26,592
1974	33,037	31,698
1975	38,884	37,235
1976	40,940	39,765
1977	45,855	44,982
1978	50,061	47,057
1979	51,890	49,816
1980	69,713	60,845
1981	89,816	78,538
1982	82,517	85,795

As additional completions are received for each quarter they will be included in subsequent revised quarterly reports. Thus, the October through December 1985 QCR includes a revised First Quarter 1985 table which includes January through March completions received by the API during the four quarters of 1985.

The QCR includes both quarterly and annual tables. The quarterly tables present statistics for total well completions only. Separate tables are not shown for exploratory and development well completions. Under the new reporting procedures, insufficient state and area information is available for exploratory drilling to provide any useful information. However, separate U.S. totals for exploratory and development well completions are shown at the bottom of each quarterly table.

Annual tables are included in the *QCR* for the current year in the fourth quarter of the year and for three prior years. Separate tables are shown for total wells, exploratory wells, development wells, and new-field wildcats. These tables also are revised on a quarterly basis to show additional reporting.

Well completions by depth interval are provided on a quarterly and annual basis. The quarterly tables include total completions only. The annual tables give the completions by depth range for the total United States and for exploratory wells as well as for onshore and offshore completions separately.

Each quarterly and annual table provides information on the number of completions and footage drilled which were reported on these tables when they were first published. These data should give the data user guidance as to the time lag for each area as well as the extent of completeness of the more current data.

Estimated Drilling Activity. Information on well completions and footage drilled is incomplete for the most recent quarters, due to the reporting lag. Therefore, to provide data users with a more useful measure of drilling activity, the QCR publishes estimated well and footage information for the current quarter and eight prior quarters.

Regression estimates are made for well completions and footage drilled for total oil wells, gas wells, and dry holes, based on information currently included in the API database. The estimates are further subdivided into five depth intervals. Separated estimates for exploratory and development drilling, for the total United States, also are shown. The estimates are revised each quarter, as more information is received, until it is determined that the maximum point of accuracy has been achieved.

However, caution should be exercised in using the estimates, particularly for the most current quarters. Although the estimating procedures demonstrate that these estimates achieve an acceptable level of accuracy, the degree of accuracy rises as more information for each quarter's activity becomes available.

The estimates are made by means of a series of multiple regression equations which utilize not only information on wells reported but on the changing lag structure as well. Changes in the reporting patterns are detected by the equation and estimates adjusted accordingly, based on the historical relationship between reporting patterns and well completions. As more data become available, the estimates are revised by means of additional regression equations that accommodate the new information.

The well and footage estimates are made independently on a disaggregated basis (that is, oil, gas, and dry wells and footage by depth category), then summed to produce estimated totals. These estimates of total activity have been found to attain the same level of accuracy as estimates made from the aggregated data directly.

Additional information on the estimating procedures may be obtained by writing to: Drilling Statistics, American Petroleum Institute, 1220 L Street N.W., Washington, D.C. 20005.

Offshore Statistics. In offshore areas, it is often considered to be economically desirable to plug discovery wells drilled from mobile units and subsequently, to drill development wells from a fixed platform. Under these circumstances, the actual discovery wells are counted as dry holes since the wells were plugged and abandoned.

Therefore, caution should be used in utilizing data on offshore exploratory wells to determine the number of newly discovered fields. The data referred to are included in the annual tables entitled "Total Exploratory Well Completions and Footage Drilled" and "New-Field Wildcat Well Completions and Footage Drilled."

Definitions. The definitions used for the compilation of drilling statistics may be found in API Technical Report No. 1, *Standard Definitions for Petroleum Statistics,* Third Edition, 1981. The publication is available from the Publications and Distribution Section, American Petroleum Institute, Washington, D.C.

Additional descriptive information as well as maps defining the various state and federal offshore areas of the United States also is available. The publication, API Bulletin D12A, *The API Well Number and Standard State and County Numeric Codes Including Offshore Waters,* reissued May 1982, may be ordered from the API Production Department, 211 North Ervay, Suite 1700, Dallas, Texas 75201.

SECTION I:

UNITED STATES DRILLING STATISTICS

ESTIMATED NUMBER OF COMPLETIONS AND FOOTAGE DRILLED

SUMMARY OF ESTIMATED COMPLETIONS: WELLS AND FOOTAGE, BY QUARTERS

APPENDIX A

QUARTERLY COMPLETION REPORT: FOOTNOTES

Footnotes

SECTION I:

Estimated Well Completions and Footage Drilled

1. Estimated well completions and footage drilled are based on well information received by the API through December 31, 1985.

   These estimates are preliminary and subject to further revision. Additional information regarding these estimates can be found on page 2.

2. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly and annual periods indicated on the table and include all wells received by the API through December 31, 1985.

SECTIONS II–V:

Well Completions, By States and By Areas

1. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly or annual period indicated on the table. The well information included in this quarterly report is based on data received by the API through December 31, 1985.

   These data are subject to further revision as information is received by the API.

2. Includes multiple completion wells which produce oil from at least one zone, but may produce gas from one or more zones.

3. Includes multiple completion wells which produce gas from all zones. Gas wells also include condensate wells.

4. May include discovery wells in offshore regions. Please see "Offshore Statistics," on page 2.

   Footnote (4) is not applicable to the development well table.

5. The total number of wells and footage which initially were reported to the API during the period shown. Quarterly totals will not add to annual totals since additional information for a quarter will be received in later quarters and will be included in the annual totals.

6. Each of the states which is subdivided into an "offshore" area includes wells which were completed in both state and federal waters adjacent to those states. Wells reported under the subdivision "Offshore Federal Waters" are not duplicative of wells reported in the "offshore" areas shown with the respective states.

   Additional descriptive information as well as maps outlining the various state and federal offshore areas is published in API Bulletin D12A. Additional information regarding this publication is given on page 2.

Well Completions, By Depth Interval

1. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly or annual period indicated on the table. The well information included in this quarterly report is based on data received by the API through December 31, 1985.

   These data are subject to further revision as information is received by the API.

2. Does not include stratigraphic and core tests and service wells.

3. Wells are classified by depth intervals on the basis of the deepest total depth reported for each well, regardless of the total amount of footage drilled. For the majority of wells reported, the deepest total depth and the total footage drilled are equal. However, for old wells drilled deeper and for new wells sidetracked out of an original hole to a new bottom-hole location, the total footage drilled will be less than the deepest total depth.

Preface

In 1966, the American Association of Petroleum Geologists (AAPG) expanded its statistical program to include development drilling as well as exploratory drilling. Drilling data collected by the AAPG for wells drilled in 1966 were published monthly by **The Oil & Gas Journal**, and annual summaries were published by the AAPG.

During the years 1967-1969 the AAPG continued to compile the drilling statistics, which were published by the API in the **Quarterly Review of Drilling Statistics** (QRD) and annually in the AAPG **Bulletin**. In January 1970 the API assumed the responsibility for the collection and the publication of drilling statistics for the United States.

For the years 1970-1985 the data collection procedures used by the API were essentially the same as those originally developed by the AAPG. The United States was divided into 30 districts. For each district there was an API Respondent responsible for reporting the initial well information to the API, either on an API well ticket or in a machine-readable format for direct computer entry. In January 1986, to relieve the industry reporting burden, the API Respondent System was dissolved and Petroleum Information Corporation became the source for the basic well information for the API well and footage database.

Each of the 30 districts also has a district Chairman of the AAPG's Committee on Statistics of Drilling (CSD) who is responsible for reviewing all well classifications reported to the API. He also classifies all exploratory wells according to the Lahee guidelines and provides additional geological information for exploratory wells.

During the years 1967 through 1984, the statistics presented in the QRD were for completed wells **reported** to the API during each quarter. They did not reflect the total number of wells **actually completed** during the quarter.

As drilling activity began to increase in the late 1970s and early 1980s, the time lapse between the quarters in which the wells were completed and the quarter in which the wells were included in the published data began to widen for reasons that were beyond the control of the API. In order to provide more useful information to the data-user community, the manner of presenting the data was changed in 1985.

Beginning with the First Quarter 1985, the API **Quarterly Completion Report** (QCR) replaced the QRD. The data presented in the quarterly reports will classify wells according to the month they were completed as opposed to the month they were reported, as was done previously. (Additional information on the contents of the QCR are included in the text.)

Since the well and footage data are often reported with a significant time lag, the data for a given period will be subject to further change for some time in the future. Thus, to provide the data user with some measure of current activity, the QCR also includes quarterly estimates of total well completions and footage drilled. These estimates are for the current quarter and eight prior quarters and represent the API's best estimate of the total number and footage of wells actually completed in a given quarter.

The API also has prepared an historical compendium, **Well Completions and Footage Drilled in the United States, 1970-1982,** which provides information on the revised basis for the years prior to those included in the QCR.

Washington, D. C.
August, 1986

The API Quarterly Completion Report

Introduction. As noted in the Preface, the API has revised its statistical reporting procedures for the quarterly drilling reports, effective with the First Quarter, 1985. Thus, the well and footage information included in the **Quarterly Completion Report** (QCR) are not comparable with the statistics published in the **Quarterly Review of Drilling Statistics** for the years 1967 through 1984. This series was discontinued with the Fourth Quarter 1984 issue.

The discontinued series presented the well and footage data on the basis of the quarter in which they were received by the API. Because of reporting delays, these data did not necessarily reflect the total number of wells actually completed during the period in which they were reported.

The new series of quarterly reports categorize all wells in the quarter in which they were completed, regardless of when they were reported to API. As additional wells for a quarter are received, they will be added to the API database and published in subsequent reports.

Acknowledging the fact that the reporting timelag will continue to affect the well data, regardless of the manner of presentation, the API also includes estimates of total well completions.

Further information on the time lag affecting the well data; the revised tabular presentations; and the drilling estimates are contained in the sections which follow.

The Time Lag. The time lag, referred to here, is the number of months between when a well is completed and when it is reported to the API. The time lag is not uniform throughout all reporting districts and tends to vary as the level of drilling activity changes. However, on average, 63% of the wells are reported within three months of when they are completed and 90% are reported within 12 months of when they are completed.

The table, "Annual Number of Oil and Gas Wells and Dry Holes: Revised Series vs. Reported Series," compares the number of wells as reported in the discontinued series (on the basis of the year reported) with the actual number of completions categorized by the time of completion.

Annual Number of Oil and Gas Wells and Dry Holes: Revised Series Vs. Reported Series

Year	*Number of Wells Completed*	*Number of Wells Reported*
1970	28,173	28,120
1971	26,268	25,851
1972	27,934	27,291
1973	27,692	26,592
1974	33,037	31,698
1975	38,884	37,235
1976	40,940	39,765
1977	45,855	44,982
1978	50,061	47,057
1979	51,890	49,816
1980	69,713	60,845
1981	89,816	78,538
1982	82,874	85,795

The Reporting Format. The tables presented in the **Quarterly Completion Report** (QCR) show the number of well completions for the quarter, based on the latest data reported to API. For example, the January through March, 1985 table, originally published, showed the number of completions which had January through March completion dates, which the API had received during the first quarter of 1985.

As additional completions are received for each quarter, they are included in subsequent revised quarterly reports. Thus, the January through March 1986 QCR includes a revised First Quarter 1985 table which includes January through March completions received by the API through the current quarter.

The QCR includes both quarterly and annual tables. The quarterly tables present statistics for total well completions only. Separate tables are not shown for exploratory and development well completions. Under the new reporting procedures, insufficient state and area information is available for exploratory drilling to provide any useful information. However, separate U. S. totals for exploratory and development well completions are shown at the bottom of each quarterly table.

Annual tables are included in the QCR for the current year in the fourth quarter of the year and for two prior years. Separate tables are shown for total wells, exploratory wells, development wells, and new-field wildcats. These tables also are revised on a quarterly basis to show additional reporting.

Well completions by depth interval are provided on a quarterly and annual basis. The quarterly tables include total completions only. The annual tables give the completions by depth range for the total United States and for exploratory wells as well as for onshore and offshore completions separately.

Each quarterly and annual table provides information on the number of completions and footage drilled which were reported on these tables when they were first published. These data should give the data user guidance as to the time lag for each area as well as the extent of completeness of the more current data.

Estimated Drilling Activity. Information on well completions and footage drilled is incomplete for the most recent quarters, due to the reporting lag. Therefore, to provide data users with a more useful measure of drilling activity, the QCR publishes estimated well and footage information for the current quarter and eight prior quarters.

Regression estimates are made for well completions and footage drilled for total oil wells, gas wells, and dry holes, based on information currently included in the API database. The estimates are further subdivided into five depth intervals. Separate estimates for exploratory and development drilling also are shown for the total United States. The estimates are revised each quarter, as more information is received, until it is determined that the maximum point of accuracy has been achieved.

However, caution should be exercised in using the estimates, particularly for the most current quarters. Although the estimating procedures demonstrate that these estimates achieve an acceptable level of accuracy, the degree of accuracy rises as more information for each quarter becomes available.

The estimates are made by means of a series of multiple regression equations which utilize not only information on wells reported but on the changing lag structure as well. Changes in the reporting patterns are detected by the equation and estimates adjusted accordingly, based on the historical relationship between reporting patterns and well completions. As more data become available, the estimates are revised by means of additional regression equations that accommodate the new information. Moreover, for the short lags where relatively fewer reports are available, the estimation procedure is based on the reports from a group of "consistent" states i.e. states that have historically shown a relatively higher correlation between the number of wells reported and the number of wells actually completed.

Additional information on the estimating procedures may be obtained by writing to: Drilling Statistics, American Petroleum Institute, 1220 L Street N. W., Washington, D. C. 20005.

Offshore Statistics. In offshore areas, it is often considered to be economically desirable to plug discovery wells drilled from mobile units and subsequently, to drill development wells from a fixed platform. Under these circumstances, the actual discovery wells are counted as dry holes since the wells were plugged and abandoned.

Therefore, caution should be used in utilizing data on offshore exploratory wells to determine the number of newly discovered fields. The data referred to are included in the annual tables entitled "Total Exploratory Well Completions and Footage Drilled" and "New-Field Wildcat Well Completions and Footage Drilled."

Definitions. The definitions used for the compilation of drilling statistics may be found in **API Technical Report No. 1, Standard Definitions for Petroleum Statistics, Third Edition, 1981.** The publication is available from the Publications and Distribution Section, American Petroleum Institute, Washington, D. C.

Additional descriptive information as well as maps defining the various state and federal offshore areas of the United States also is available. The publication, API Bulletin D12A, **The API Well Number and Standard State and County Numeric Codes Including Offshore Waters,** reissued October 1985 may be ordered from the API Production Dept., 211 North Ervay, Suite 1700, Dallas, Texas 75201.

IMPORTANT NOTE

Two Major Changes Beginning With The First Quarter 1986

Two major changes, in the source of the data and the estimation procedures used, have been instituted in the **Quarterly Completion Report,** of which the data user should be aware.

Source of Data. Prior to January 1986, well completion reports came to the API from several sources. More than half of the completion reports received came from Petroleum Information Corp. (PI); the rest were obtained from state agencies and other reporting organizations. These completion reports formed the basis for API's **Monthly Completion Reports** and **Quarterly Completion Reports**. Beginning in January 1986 Petroleum Information became the API's sole source for well completion reports. The use of PI as the single source of information is expected to result in shorter delays in the reporting process.

There are some small differences between API's and PI's classification of some combination oil/gas wells. Most of the combination wells in the API database for 1981 through 1985 have been reclassified in order to account for the differences in the characterization of these combination oil/gas wells. (The combination wells constitute about 4 to 6 percent of the number of producing wells and about 2 to 4 percent of the total number of wells.) For a further discussion of combination wells, see Appendix A, page 109.

Estimation Methodology. The new methodology is based on a series of weighted multiple regression equations. As with the previous methodology, the model equations use the number of completion reports known to date, the change in the number reported, and the seasonality of the reports. For the recent past, where relatively fewer reports are available, the estimation procedure is based on reports from a group of "consistent" states. That is, states that have historically shown a relatively higher correlation between the number of wells reported and the number actually completed. The new methodology should increase the accuracy of the estimates and decrease the magnitude of the revisions.

The short term disadvantage resulting from the change to PI data, and the shortened reporting lags associated with it, is that the continuity of the data series is disrupted. The increase in the proportion of more recent period reports creates a potential bias in that the estimation procedure would overestimate the true number of recent period completions based on the time lags observed in reporting over the previous years. Even though the bias cannot be measured with high accuracy, an effort to correct for it was made by adjusting the estimates for the first and second quarters of 1986 by the observed improvement in timeliness. The adjustment will only be performed during the transition period.

In light of these changes it is important to use the estimates with caution, particularly the estimates for the Fourth Quarter 1985 and the First and Second Quarters of 1986. In the long run, the new source of data and estimation methodology will improve the accuracy of the estimates.

For more information on the difference between the old data collection method and the new method and/or a detailed description of the estimation procedure, please write to: Paul Wakim, Statistics Department, American Petroleum Institute, 1220 L St. N.W., Washington, D.C. 20005.

ESTIMATED WELLS AND FOOTAGE DRILLED IN THE U. S.

APPENDIX A

QUARTERLY COMPLETION REPORT: FOOTNOTES

Footnotes

SECTION I:

Estimated Well Completions and Footage Drilled

1. Estimated well completions and footage drilled are based on information received by the API through March 31, 1986 for the First Quarter; and through June 30, 1986 for the Second Quarter.

   These estimates are preliminary and subject to further revisions. Additional information regarding these estimates can be found on page 2.

2. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly and annual periods indicated on the table and include all wells received by the dates indicated in note 1.

SECTIONS II-IV:

Well Completions, By States and By Areas

1. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly or annual period indicated on the table. The well information included in this report is based on data received by the API as indicated in note 1, Section I. These data are subject to further revision as information is received by the API.

2. Includes multiple completion wells which produce oil from at least one zone, but may produce gas from one or more zones.

3. Includes multiple completion wells which produce gas from all zones. Gas wells also include condensate wells.

4. May include discovery wells in offshore regions. Please see "Offshore Statistics," on page 2.
   Footnote (4) is not applicable to the development well table.

5. The total number of wells and footage which initially were reported to the API during the period shown. Quarterly totals will not add to annual totals since additional information for a quarter will be received in later quarters and will be included in the annual totals.

6. Each of the states which is subdivided into an "offshore" area includes wells which were completed in both state and federal waters adjacent to those states. Wells reported under the subdivision "Offshore Federal Waters" are not duplicative of wells reported in the "offshore" areas shown with the respective states. Additional descriptive information, as well as maps outlining the various state and federal offshore areas, is published in API Bulletin D12A. Additional information regarding this publication is given on page 2.

Well Completions, By Depth Interval

1. The wells and footage shown are the cumulative number of wells residing on the API database for the quarterly or annual period indicated on the table. The well information included in this report is based on data received by the API as indicated in note 1, Section I.
   These data are subject to further revision as information is received by the API.

2. Does not include stratigraphic and core tests and service wells.

3. Wells are classified by depth intervals on the basis of the deepest total depth reported for each well, regardless of the total amount of footage drilled. For the majority of wells reported, the deepest total depth and the total footage drilled are equal. However, for old wells drilled deeper and for new wells sidetracked out of an original hole to a new bottom-hole location, the total footage drilled will be less than the deepest total depth.

1986 API Database Revisions

Data Collection Procedures. As noted in the Preface, the API has changed the procedures used to collect information on well completions. Effective January 1, 1986 the Petroleum Information Corporation (PI) became the source for well completion information throughout the United States. Because of this change, the API expects that there will be some discontinuity in the data series during the transition period between the two sources.

Oil and Gas Well Revisions. In 1966 the American Petroleum Institute, in conjunction with other industry associations and federal and state agencies, agreed on a set of definitions for terms used in reporting statistical information. The purpose was to ensure uniformity in reporting. Included were the definitions for oil and gas wells*. The API's drilling publications have provided these definitions as footnotes since 1970.

In most cases these definitions were adhered to. One exception to this was for the state of Ohio, where a substantial number of wells produce primarily gas along with, in many cases, a relatively small amount of oil. The Ohio Division of Oil and Gas classifies these wells as "combination" wells. In reporting these wells to the API, the Ohio Oil and Gas Division developed a formula for classifying these "combination" wells as either oil or gas. Therefore, for the years 1970 through 1985, certain wells were classified as gas wells which, under API definitions, would have been classified as oil wells.

PI, on the other hand, adhered to the established definitions, reporting these wells as oil wells. Therefore, in January 1986, when PI began to provide the well completion data, wells which in the past would have been reported as gas wells now are being included in the oil well category. This change is not too apparent for the current report period, since the reporting time lag for some areas tends to minimize the impact. However, as more 1986 data are reported to the API, this well classification shift, from gas to oil, would have become more evident.

Therefore, the API has modified its database and has changed the previously reported gas wells to oil wells to coincide with the new reporting basis. Thus, the First and Second Quarter "Quarterly Completion Report" tables presenting the 1984 and 1985 data shows the number of oil and gas wells on the new basis.

*A well which produces oil from one zone, regardless of the number of productive gas zones, is classified as an oil well. A well which produces gas from one or more zones is classified as a gas well.

APPENDIX C

1985 SUSPENSE WELL REPORT

APPENDIX C

SUSPENSE WELL REPORT

At the end of each report year a number of wells remain in a "suspense file." These are wells which have been drilled to total depth and operations suspended (the rig released) without making a completion, either as a producer or a dry hole. Because some of the information necessary to complete the well ticket is not available, these wells cannot be entered into the data system. As the information becomes available, these wells will be reported into the current year's data file.

There are a number of reasons why the wells are being held in suspense, the major ones being: (1) waiting on tight hole release; (2) waiting on production tests; (3) waiting on the completion of a platform drilling program; (4) waiting on the completion of production facilities; (5) waiting on the completion of transportation facilities; as well as a number of other reasons such as waiting on the evaluation of a well, temporary mechanical failures, sand problems, etc.

At the end of 1985 a total of 4,894 wells, exploratory and development, were in the suspense file in the following areas:

State or District	Number of Wells
Colorado	74
